IN THE CLAIMS:

Please amend the claims as follows:

a' 1. (amended) A communication method for providing  
information in an intelligent network including a  
transmission layer having a user terminal and a switching  
system connected through a first network and an intelligent  
layer connected to said transmission layer through a second  
network for issuing a connection command of a line to said  
transmission layer, comprising the steps of:

[a step of] entering by a user a connection number  
of the user terminal, a connection number of an information  
provider terminal and a time to receive an [the] information  
providing service into a user database provided in said  
transmission layer;

[a step of] reading data registered in said user
